SUMMARY

Java Software Engineer with 2.5+ years of experience at American Express, building cloud-native microservices, AI-powered engineering tooling, and data pipelines. Hands-on expertise in Spring Boot, PostgreSQL, REST APIs, AI agents, CI/CD, and Docker.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, JavaScript, C++, HTML/CSS

Frameworks: Spring Boot, WebFlux, Vert.x, Next.js, React, Node.js, TensorFlow

CI/CD & Tooling: GitHub Actions, Jenkins, Maven, Git, Gradle, JIRA, Postman, Pact Broker

Skills: Microservices, Distributed Systems, AI Agents, AI Code-Quality Guardrails, Machine Learning, TDD, API Design

WORK EXPERIENCE

American Express, Software Engineer II, New York, NY

Sep 2023 - Present

- Building AI agents that scan 1,000+ enterprise repositories to extract API inventories, external service calls, and database connections into compact verification reports -- cutting human review from full-repository audits to pinpointing flagged targets before onboarding into the enterprise database serving backend and frontend systems.
- Implemented enterprise-standard and custom guardrails -- automated testing and linting quality gates -- to regulate AI-generated code, improving quality and consistency across AI-assisted development.
- Migrating repository analysis from local cloning to CI-native scanning: prototyping GitHub Actions workflows with GitHub Copilot that scan newly onboarded repositories during CI and publish scan-result artifacts.
- Architected and built a Topology View application mapping artifact graphs across distributed services using Spring Boot, Next.js, and PostgreSQL, giving hundreds of engineers real-time visibility into cross-domain application and API relationships.
- Developed a Kotlin Spring Boot tool that evaluates Swagger files across GitHub repositories against AMEX API strategy guidelines, identifying non-compliant patterns and feeding results into the well-architected scorecard.
- Delivered contract testing adoption using Pact Broker across two Spring Boot/WebFlux microservices. Developed a local Pact server via Docker and PostgreSQL, integrated tests into GitHub Actions CI, and coordinated with internal teams and vendors.
- Led a team of EA and MARS interns on a MARS monitoring dashboard; mentored on Python, REST APIs, microservice architecture, database design, and sprint planning.
- Won 2nd place at the 2025 Enterprise Architecture Hackathon. Built a mock MCP-like pipeline in GitHub Copilot using GHA to auto-detect workflow logs, generate error reports, and suggest fixes during pull requests.

American Express, Software Engineer Intern, New York, NY

Jun - Aug 2022

- Contributed to a production middleware application that detokenized internal data using Vert.x and Java; deployed and validated a Java application via Jenkins CI/CD, Postman API testing, and JIRA/Scrum.

PROJECTS & LEADERSHIP EXPERIENCE

Mr. House Chatbot (Raspberry Pi)

- Multi-agent AI pipeline with LoRA fine-tuning deployed on a Raspberry Pi using Ollama -- a custom Pip-Boy chatbot with character-specific personality, external case designed with Blender.

Resume Screening NLP System

- Built an NLP & OCR pipeline using KNN/RNN models. Achieved 94% accuracy using RNN. Applied text preprocessing on HTML format resume datasets.

EDUCATION

Brooklyn College, BS in Computer Science, Brooklyn, NY

2023

- GPA: 4.0

Break Through Tech AI @ Cornell Tech, New York, NY

Jun 2022 - May 2023

- Built data analysis pipeline and trained/validated ML models; competed in a Google-sponsored AI/ML challenge.
