SUMMARY

Backend Software Engineer with 3+ years at American Express building cloud-native microservices, AI-powered engineering tooling, and internal developer platforms. Hands-on expertise in Java, Kotlin, Spring Boot, PostgreSQL, REST API design, AI agents, Docker, OpenShift/Kubernetes, and GitHub Actions CI/CD.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, JavaScript, C++, HTML/CSS

Frameworks: Spring Boot, WebFlux, Vert.x, Next.js, React, Node.js, TensorFlow

Cloud & CI/CD: OpenShift (Kubernetes), Docker, GitHub Actions, Jenkins, Maven, Git, Gradle, JIRA, Postman, Pact Broker

Skills: Microservices, Distributed Systems, AI Agents, AI Code-Quality Guardrails, Machine Learning, TDD, API Design

WORK EXPERIENCE

American Express, Software Engineer II, New York, NY

Sep 2023 - Present

- Architected and built Architecture Insight View, a full-stack application mapping artifact graphs across distributed services using Spring Boot, Next.js/React, and PostgreSQL, designed to give engineers real-time visibility into application and API relationships; deployed to Hydra, Amex's OpenShift (Kubernetes) private cloud, ahead of rollout to engineering teams.
- Built the platform's repository-scanning AI agents, which scan 1,000+ enterprise repositories and extract API inventories, external service calls, and database connections into verification reports that replace full-repository audits with pinpointed targets before onboarding.
- Developed a Kotlin Spring Boot tool that evaluates Swagger files across GitHub repositories against AMEX API strategy guidelines, identifying non-compliant patterns and feeding results into the well-architected scorecard.
- Maintain the platform's full container stack - backend, frontend, and database images - on OpenShift, upgrading base images, remediating vulnerabilities from recurring scan reports, and debugging runtime failures from pod logs.
- Implemented enterprise-standard and custom guardrails (automated testing and linting quality gates) to regulate AI-generated code, improving quality and consistency across AI-assisted development.
- Delivered contract testing adoption using Pact Broker across two Spring Boot/WebFlux microservices. Developed a local Pact server via Docker and PostgreSQL, integrated tests into GitHub Actions CI, and coordinated with internal teams and vendors.
- Led a team of EA and MARS interns on a MARS monitoring dashboard; mentored on Python, REST APIs, microservice architecture, database design, and sprint planning.
- Won 2nd place at the 2025 Enterprise Architecture Hackathon. Built a mock MCP-like pipeline in GitHub Copilot using GHA to auto-detect workflow logs, generate error reports, and suggest fixes during pull requests.

American Express, Software Engineer Intern, New York, NY

Jun - Aug 2022

- Contributed to a production middleware application that detokenized internal data using Vert.x and Java; deployed and validated a Java application via Jenkins CI/CD, Postman API testing, and JIRA/Scrum.

PROJECTS & LEADERSHIP EXPERIENCE

Mr. House Chatbot (Raspberry Pi)

- Multi-agent AI pipeline with LoRA fine-tuning deployed on a Raspberry Pi using Ollama: a custom Pip-Boy chatbot with character-specific personality, external case designed with Blender.

Resume Screening NLP System

- Built an NLP & OCR pipeline using KNN/RNN models. Achieved 94% accuracy using RNN. Applied text preprocessing on HTML format resume datasets.

EDUCATION

Brooklyn College, BS in Computer Science, Brooklyn, NY

2023

- GPA: 4.0

Break Through Tech AI @ Cornell Tech, New York, NY

Jun 2022 - May 2023

- Built data analysis pipeline and trained/validated ML models; competed in a Google-sponsored AI/ML challenge.
